I know control systems is boring but the text book does not have to make it more boring. This book has so much writing and is so plain(no colours and so on) that you feel like you are reading scholastic articles all the time. This does not bode well with the "basic" concepts of control systems, better suited for more advance course? Not sure.

For example the fly-ball governor developed by James Watt to control overspeed of his steam engine was developed out of necessity, long before the science of controls came into being.

A control system (also called a controller) manages a system's operation so that the system's response approximates commanded behavior. A common example of a control system is the cruise control in an automobile: The cruise control manipulates the throttle setting so that the vehicle speed tracks the commanded speed provided by the driver.
