Molecular Genetics Study

As you learned in Chapter 1, molecular anthropologists use genetics to compare ancient and modern populations as well as study nonhuman primates. Molecular anthropologists must also stay current with advancing technology (you will learn about the results of some of this genomic research as it has been applied

principle is that the crystalline atoms cause a beam of X-rays to diffract into many specific directions (Fig. 2.10). By measuring the angles and intensities of these diffracted beams, a crystallographer can produce a 3D picture of the density of electrons within the crystal.

Tomasz P. Jurkowski, in Epigenetics Methods, 2020 6 Quantification of the global level of 5hmC with a dot blot assay. Dot blot assay is probably one of the most straightforward assays that can be used to quantify (or rather compare) the levels of 5hmC in different samples. For this, serial dilutions of standard modified and unmodified DNA and
