Concise Introduction To Logic 5th

In predicate logic, universal instantiation (UI; also called universal specification or universal elimination, and sometimes confused with dictum de omni) is a valid rule of inference from a truth about each member of a class of individuals to the truth about a particular individual of that class.

Universal Instantiation - Wikipedia

In propositional logic, transposition is a valid rule of replacement that permits one to switch the antecedent with the consequent of a conditional statement in a logical proof if they are also both negated.It is the inference from the truth of "A implies B" to the truth of "Not-B implies not-A"; and conversely. It is very closely related to the rule of inference modus tollens.

Transposition (logic) - Wikipedia

Introduction. Go is a procedural programming language. It was developed in 2007 by Robert Griesemer, Rob Pike, and Ken Thompson at Google but launched in 2009 as an open-source programming language. Programs are assembled by using packages, for efficient management of dependencies. This language also supports environment adopting patterns alike to dynamic languages.
