Define No Solution In Math

Sometimes equations have no solution. This means that no matter what value is plugged in for the variable, you will ALWAYS get a contradiction. Watch this tutorial and learn what it takes for an equation to have no solution.

What Does It Mean When An Equation Has No Solution ...

No solution. no something to speak of. no something/nothing/not anything to speak of. No Sonic Limits. no sooner (do something) than (do something else) no sooner ... than. no sooner ... than. no sooner do something than do something else. no sooner e than.

No solution - definition of No solution by The Free Dictionary

A missing solution is a solution that is a valid solution to the problem, but disappeared during the process of solving the problem. Both are frequently the consequence of performing operations that are not invertible for some or all values of the variables, which prevents the chain of logical implications in the proof from being bidirectional.

Systems of equations can be used to solve many real-world problems. In this video, we solve a problem about a toy factory. In this case, the problem has no viable solution, which means the information describes an impossible situation.

then there are "infinite solutions", meaning, when graphed, the two equations would form the same line. If the variables disappear, and you get a statement that is never true, such as $0 = 5$ or $4 = 7$. then there is "no solution", meaning, when graphed, the two equations would form parallel lines, which never intersect. equations with many solutions or no solution When we solve a linear equation in one variable, we may find exactly one value of x that will make the equation a true statement. But, when we simplify some equations, we may find that they have more than one solution or they do not have solution.

Equations with Many Solutions or No Solution

A solution is any number that, when replaced into the equation, will give an equality. An example of an equation without a solution is $x = x + 1$. No matter what number you use for "x", the right...

What does no solution in algebra mean? - Answers

A value, or values, we can put in place of a variable (such as x) that makes the equation true. Example: $x + 2 = 7$. When we put 5 in place of x we get: $5 + 2 = 7$. $5 + 2 = 7$ is true, so $x = 5$ is a solution. See: Variable.

In other words, there is no real solution to this equation. For the same basic reason there is no solution to the inequality. Squaring any real x makes it positive or zero and so will never be negative. We need a way to denote the fact that there are no solutions here.

Unbounded solution The solutions of a linear programming problem which is feasible can be classified as a bounded solution and an unbounded solution. The unbounded solution is a situation when the optimum feasible solution cannot be determined, instead there are infinite many solutions.
