Types. There are three types of muscle tissue in the body: skeletal, smooth, and cardiac.. Skeletal muscle. Skeletal muscle, or "voluntary muscle", is a striated muscle tissue that primarily joins to bone with tendons.Skeletal muscle enables movement of bones, and maintains posture. The widest part of a muscle that pulls on the tendons is known as the belly.

Growth hormone (GH) or somatotropin, also known as human growth hormone (hGH or HGH) in its human form, is a peptide hormone that stimulates growth, cell reproduction, and cell regeneration in humans and other animals. It is thus important in human development. GH also stimulates production of IGF-1 and increases the concentration of glucose and free fatty acids.

Scope. Life expectancy in the United States and other industrialized countries continues to increase and is expected to reach 100 years by about 2025. 1 Women have longer average life expectancies than do men and can thus soon expect to spend more than one-third of their lifetimes in menopause. 2 The skin is incredibly durable, but like all other systems, it eventually succumbs to the ...
