Set theory begins with a fundamental binary relation between an object o and a set A . If o is a member (or element) of A , the notation $o \in A$ is used. A set is described by listing elements separated by commas, or by a characterizing property of its elements, within braces $\{ \}$. Since sets are objects, the membership relation can relate sets as well.

Introduction to Theory of Computation

Set theory and mathematical logic compose the foundation of pure mathematics. Using the axioms of set theory, we can construct our universe of discourse, beginning with the natural numbers, moving on with sets and functions over the natural numbers, integers, rationals and real numbers, and eventually developing the transfinite ordinal and cardinal numbers.
