### Medical Image Recognition, Segmentation and Parsing - 1st ...

Medical image recognition, segmentation, and parsing are essential topics of medical image analysis. Medical image recognition is about recognizing which objects are inside a medical image. In principle, it is not necessary to detect or localize the objects for object recognition; but in practice, often it is beneficial to associate object recognition with object detection or localization.

### The Rise of Image Recognition AI in Medical Diagnostics

Deep learning-based semi-supervised learning (SSL) algorithms have led to promising results in medical images segmentation and can alleviate doctors' expensive annotations by leveraging unlabeled data. However, most of the existing SSL algorithms in literature tend to regularize the model training by perturbing networks and/or data.

### Medical Imaging: Artificial Intelligence, Image ...

Segmentation is the process of partitioning an image into different meaningful segments. In medical imaging, these segments often correspond to different tissue classes, organs, pathologies, or other biologically relevant structures. Medical image segmentation is made difficult by low contrast, noise, and other imaging ambiguities.
