Answered: In c programming, with examples, when,... | bartleby

How to write a C program? A program must have at least a main function. A function consists of declarations and statements. A statement is an expression followed by a semicolon. For example, a + b, printf("C program examples") are expressions and a + b; and printf("C is an easy to learn computer programming language"); are statements.

C programs | Programming Simplified

C functions are used to avoid rewriting same logic/code again and again in a program. There is no limit in calling C functions to make use of same functionality wherever required. We can call functions any number of times in a program and from any place in a program. A large C program can easily be tracked when it is divided into functions.
