Microwave Oven Radiation | FDA

The radiation used by microwave ovens has a very long wavelength, so that it is not visible to our eyes. It is, however, at just the right wavelength to excite water molecules, thereby heating them, and this in turn heats whatever food is in the microwave. Microwave ovens contain nearly all of the radiation they produce inside. 02 M

Do Microwaves Give off Radiation? (with pictures)

Karen Gill: Microwave ovens use electromagnetic waves of a very specific length and frequency to heat and cook food. These waves target specific substances, using their energy to produce heat, and...

6 Questions Answered About Microwaves

However, microwaves emit non-ionising radiation; a type of radiation that has enough energy to move atoms around within a molecule but not enough to remove electrons. What does this mean? Because the radiation from microwaves is non-ionising, it can only cause molecules in the food to move.
