1: Use high quality coax like H100 and not RG58 or RG213. 2: Use a good tuner that will tune it 50 Ohm for the transceiver. As for the ZS6BKW, it does not work on 80m, it's a dummyload as the radiators are too short to function on 80m. Impedance is not the same as resonance. Also, coax losses at high SWR are minimal with good coax.
